The application has been amended as follows:

In claim 11:

On line 7 change "laser head" to - - laser heads - -.

2. The following is an examiner's statement of reasons for allowance: Regarding claim 11, none of the references of record discloses or suggests, alone or in combination, "A residual stress improving apparatus for piping, comprising: a laser head portion in which a plurality of laser heads for delivering the laser light are slidably provided to a slide member arranged in parallel to a direction of a pipe axis of the straight pipe portion; and a circumferential direction moving unit moving the laser heads, together with the laser head portion." Regarding claim 12, none of the references of record discloses or suggests, alone or in combination, a residual stress improving apparatus for piping, comprising: a laser head portion for holding at least one laser head for delivering the laser light; and a circumferential direction moving unit moving the laser heads, together with the laser head portion, wherein the residual stress improving apparatus for piping comprises: a pivoting unit pivoting the laser head portion around a pivot center in a plane including the pipe axis, the pivot center being a pivot shaft

located on a rearward side, in a direction of the pipe axis, of the laser head portion; a pipe axis direction moving unit moving the laser head portion along the pipe axis direction. Regarding claim 13, none of the references of record discloses or suggests, alone or in combination, a residual stress improving apparatus for piping comprising: a laser head portion holding at least one laser head, a circumferential direction moving unit moving the laser head, together with the laser head portion, along the outer peripheral surface of the straight pipe portion and along a circumferential direction about a pipe axis of the straight pipe portion; an oscillating unit moving the laser head in an oscillatory manner along the pipe axis direction; and a delivery direction adjusting unit adjusting an orientation of the laser head in a plane including the pipe axis of the piping, wherein the oscillating unit is a linear motor while the delivery direction adjusting unit is a tilt drive motor, the laser head portion includes a stationary portion of the linear motor, the stationary portion being arranged in parallel to the pipe axis direction, and a moving portion of the linear motor, the moving portion moving along the linear motor fixing portion in the pipe axis direction.
